

Press release

Kaiserwetter closes technical and commercial management agreements for wind and solar parks in Europe with a total installed capacity of 234 MW

Hamburg, 13th January 2016 – Kaiserwetter Energy Asset Management GmbH, an independent service provider focused on the Asset Management of wind and solar parks within Europe successfully started into the New Year. By the end of 2015, the company located in Hamburg has closed technical and commercial management agreements with a total installed capacity of 234 MW. Thus, Kaiserwetter is expanding its cooperative partnership which has been existed for several years with five major customers consisting of institutional investors and European energy companies. “Our independency, the transparency within our services and the high quality of our work were decisive for continuing our business relations during our negotiations”, the Managing Director of Kaiserwetter Energy Asset Management, Mr. Hanno Schoklitsch assesses the successful conclusion of the contracts.

Moreover, Kaiserwetter has implemented a Portfolio Management System at the beginning of 2015 allowing investors to monitor and analyze all current assets – no matter if it is a wind park, solar park or another generating unit. Long-term contracts with the current managers do not pose a problem for this approach. Kaiserwetter’s Portfolio Management offers its customers the opportunity to add an aggregated top level which is able to challenge the current technical and commercial managers to significantly and sustainably improve the efficiency of the wind and solar parks – at a very competitive price. “Both during last year’s expeditions like the “Husum Wind” or the “Handelsblatt Erneuerbare Energien Annual Conference” and from our existing customers, we got a very positive feedback. The investors realize the considerable added value”, resumes Hanno Schoklitsch giving a forecast for the New Year: “ We currently work on our Portfolio Management System 2.0 which will be presented to our customers in the course of the year. Even during the financial year 2016, it will be our claim to be first mover in the market offering innovative products. The market should be curious.”

About Kaiserwetter Energy Asset Management GmbH

Kaiserwetter Energy Asset Management which was founded in 2012, is an independent, international service provider focused on the technical and commercial Asset Management of wind and solar parks. On the basis of the Asset Management, together with the Portfolio Management and Risk Management, the Hamburg based company provides a modular system of IT-based services.

Kaiserwetter offers its qualified services to the owners of wind and solar parks as well as to investment companies, insurance companies, asset managers and public utilities. The aim is to maximize the value of the wind and solar parks, to reduce operating costs and risks and to increase returns – sustainably and in line with compliance requirements. Thanks to those services, Kaiserwetter enjoys its position as first mover on a young market. Having subsidiaries in Madrid and Copenhagen, the Kaiserwetter team consisting of 60 employees is currently managing wind and solar parks in Germany, Spain, France and Poland with a total installed capacity of 470 MW representing an investment volume of EUR 900 million.
