### **ARISTOTELES, the digital portfolio management tool by Kaiserwetter, receives three awards in Europe**

- **The Hamburg-based business receives awards in Spain and Great Britain**
- **The portfolio management tool for renewable energies first presented at the Cop 22 combines the Internet of Things with big data analytics**

**Hamburg, 12 June 2017** –The Hamburg-based business Kaiserwetter Energy Asset Management GmbH, an independent services provider for the management of wind and solar parks, has received as many as three awards in Europe for its pioneering work in the area of digitalization of renewable energies. The company receives these recognitions for its product ARISTOTELES, first presented at the UN Climate Change conference (COP 22) in Marrakech in November 2016. ARISTOTELES is a digital tool for the cross-border portfolio management of renewable energy facilities.

#### **Spanish and British awards**

For this digital achievement, Kaiserwetter received the “Premios Ejecutivos Award” in the “Best Energy Company 2017” category by the renowned business magazine Ejecutivos in Spain. Every year, this award goes to businesses and remarkable people for their extraordinary achievements. The award ceremony took place in late May in Madrid in the presence of Íñigo de la Serna, the Spanish Minister of Development (Ministerio de Fomento). ARISTOTELES received yet another award in Spain at the “Actualidad Económica Awards,” where the business magazine Actualidad Económica ranked it as one of the “Top 100 Ideas of the Year 2017” in the energy category. This magazine awards prizes to the most innovative companies and business ideas. In Great Britain, the “Capital Finance International” magazine honored the Hamburg-based company by ranking it as the “Best Renewable Energy Asset Managers – Germany 2017” on the occasion of their “Asset Management Awards”. Every year, the magazine recognizes individuals and companies that make a considerable contribution to economic progress and value creation for the general public with their ideas and products.

Hanno Schoklitsch, the managing director, commented on the awards: “We are one of the very first EnerTech companies and ARISTOTELES is an excellent product with disruptive potential. Relying on our digital process environment and on the type of data analysis we use, we can identify investment-related risks from a technical, but especially from a financial perspective very early in the process. All that can be done worldwide without any regional limitations. We are very excited about the recognition provided by specialized media as well as the general public. After all, the use of digital technology is a major contribution to the commitment of COP 22 of finding a financially viable way of implementing the Paris Climate Change Objectives in the near future. Investments in renewable energies while using the IoT and big data analytics offer unexpected opportunities of boosting the expansion of renewable energies on a global scale. Or, to put it differently: there are no more excuses of not getting things done.”

### **ARISTOTELES combines the IoT with the renewable energy industry**

ARISTOTELES by Kaiserwetter is a first-ever digital tool for portfolio management designed to help operators, investors and banking institutions manage their solar facilities, wind parks, biomass facilities and hydroelectric power plants. It aggregates, analyzes and correlates (Internet of Things, big data analytics) independently collected production-related and financial data of all assets. As a result, the risk associated with investments in renewable energies is minimized while asset performance is maximized. Executive level dashboards display all parameters and KPIs at the click of a button on any kind of mobile device, which allows executives to know if and how the invested capital is yielding a return on investment, independently of the production mode. This service is accessible anywhere in the world and around the clock.

### **About Kaiserwetter Energy Asset Management GmbH**

Kaiserwetter, founded in 2012, is an independent service provider for wind and solar asset management with an international presence. Its range of services combines traditional technical and commercial asset management with the digital integration of all processes and data. "Aristoteles," a portfolio management tool, aggregates and correlates production-related and financial asset data, with the goal of permanently maximizing the energy production of wind and solar parks as well as all renewable energy assets for its clients and optimizing the efficiency of used resources. Kaiserwetter's clients include energy providers as well as institutional and private investors. Kaiserwetter manages 498 MW on behalf of third parties in four European countries. A company with European roots, Kaiserwetter employs a staff of 50 and has offices in Hamburg, Madrid and Copenhagen.
