Kaiserwetter finalist in the United Nations Innovative Climate Finance Tool of the Year

New York, September 7, 2017 – Kaiserwetter, an international service provider for wind and solar asset management, reached the final of the Innovative Climate Finance Tool Competition. The final decision was announced yesterday in New York awarding The Climetrics Solution as the winner.

The pioneering digital tool developed by Kaiserwetter, ARISTOTELES, has been highlighted as one of six main international financial solutions in the area of sustainability, during the annual competition organized by Climaaction, collaborating with the United Nations Environment Program (UNEP), the main global organization for environmental protection and management. Integrating the possibilities of the Internet of Things (IoT), Big Data analytics and digital infrastructure in The Cloud, ARISTOTELES is the first digital innovation for the management of portfolios of renewable energy assets. This end-to-end solution provides investors with a tool to sustainably maximize the transparency and performance of energy assets across various countries from an independent, standardized and tamper-proof digital database. It is the first time that directors can consult technical and financial information live on-screen on both computers and phones in a compact, transparent and real-time format.

Together with The Climetrics Solution and ARISTOTELES, the other four finalists were preselected from hundreds of proposals presented on the 25th of August. Beyond Ratings, with CLAIM, a methodology for analyzing climate strategies, ClearlySo thanks to their platform of ClearlySo ATLAS, Nexus for Development, which presented The Pioneer Facility, aimed at companies supplying sustainable solutions in developing countries, and finally UN environment, with their concept of Sustainable Financial Facilities.

“After the launch of ARISTOTELES at an international level less than a year after COP22, we are excited to receive this prestigious recognition on behalf of an organization like Climate Action. The concept of digitization and the adoption of IoT and Smart Data Analytics is revolutionary, and an inevitable step in the renewables sector with regard to boosting the investment and profitability of assets to cope with the common challenges posed by the fight against climate change”, comments Hanno Schoklitsch, founder and CEO of Kaiserwetter Energy Asset Management.

About Kaiserwetter Energy Asset Management

Founded in 2012, Kaiserwetter is an independent and international service provider dedicated to the management of renewable energy assets.

The company offers specialized services to investors of renewable energies such as investment funds, financial institutions, and Independent Power Producers. Its objective is to optimize the intrinsic value of any power generating asset capable of operating at a lower cost and risk, and to maximize profits in a sustainable manner in strict accordance with all regulatory constraints.

Through these services, Kaiserwetter has positioned itself as a pioneer in the young renewable market called Enertec.

With branches in Madrid, Hamburg and Copenhagen, and around 50 people employed, it is responsible for 498 MW of renewable power in Germany, Spain, France and Poland. Kaiserwetter recently opened offices in New York, and it is researching new ventures in North and South America.
